

01

**REMOVAL OF PROVISIONALS**

- Anesthetize patient
- Place Optragate
- Remove micro-leakage if any

02

**RESTORATION SEAT VERIFICATION AND TRY-IN**

- Check fit of restorations one at a time, verify marginal integrity
- Check fit of restorations 2 by 2, then all together (verify fit of proximal contacts)
- Use try-in paste to verify shading

03

**RESTORATION PREPARATION (ALL E.MAX, LISI, EMPRESS RESTORATIONS ARE ETCHED PRIOR TO DELIVERY)**

- Ivoclean each preparation
- Fill with cement of selected shade
- Place Restorations in light secure box

04

**TEETH PREPARATION**

- Bonding steps
- Etch all teeth (3 at a time)
- Apply Desensitizer, blot dry
- Apply Primer - let air dry thoroughly
- Cure 10 seconds per tooth

05

**CEMENTATION**

- Seat Restorations starting with centrals, then laterals, cuspids, and so on...
- Tack and wave, remove excess
- Separate contacts with serrated saw and/or floss contacts with floss

06

**FINAL POLYMERIZATION**

- Coat margins with De-Ox or glycerin
- Light cure all restorations for 40 seconds facial/20 seconds lingual per tooth
- Remove any cords and floss teeth

07

**FINISHING**

- Use Finishing strips (3M 1954N then Epitek: Blue-Green-White-Coral)
- Clean up cement with scalpel, finish margins with high speed 15 micron diamonds, followed by 30 fluted carbides
- Adjust Occlusion (special finishing kits for Zirconia)
- Polish with ceramic polishing kit and Diashine on robinson brush if needed
- Take final photo
